

CHRONOEXE

Quick View

Universal Compatibility:

Advanced interface designed for every chronograph.

Data Analytics:

Chart analysis including velocity increments, comparisons, and symmetry.

Data Management:

Statistical data export to files with automated management of file names and directories.

Hybrid Filtering:

Advanced two-dimensional (2D) hybrid filter for precise data processing.

Universal Sensor Support:

Parametric input transforms the application into a standalone chronograph that supports optical, ultrasonic, radar, and impedance sensors.

R&D Focused:

A universal measurement solution optimized for research and development processes.
